DETAILED ACTION

The application is published application number: 2005/0203488. The publication is classified in US 606/1.

The Applicant is requested to provide (or check for accuracy) at the beginning of the Specification updated status information (serial numbers and patent numbers) of all related applications. The effective filing date of this application 3-9-04.

Pending claims are 1-31.

Elected (traversed) claims 8-12 and 25-27 are examined below.

Non-elected / withdrawn claims are 1-7, 13-24 and 28-31.

Independent claims are 8 and 25.

Information Disclosure Statement

The information disclosure statement (IDS) submitted on 5-20-05 and 11-22-04 are being considered by the examiner.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 8-12 and 25-27 are rejected under 35 U.S.C. 102(b) as being anticipated by Edwards et al. (6,258,087).

Note: specific references in the patented disclosure below are not limiting to those excerpts. (The Office reserves the right in future actions to apply other excerpts, need be, from the patent.)

The patent discloses:

8. Apparatus (24) for mapping out endoluminal gastrointestinal surgery, the apparatus comprising: an endoluminal support (30) configured for endoluminal placement within a gastrointestinal lumen; and a radiofrequency element (36; col. 10:11-5) on the support for marking ("forming lesions") the gastrointestinal lumen.

9. The apparatus of claim 8 further comprising an approximation element (72) configured to approximate an interior of the gastrointestinal lumen and the endoluminal support (30). See, *inter alia*, figures 15 and 16.

10. The apparatus of claim 9, wherein the approximation element (72) is disposed on the endoluminal support (30). See, *inter alia*, figures 15 and 16.

11. The apparatus of claim 8, wherein the radiofrequency element comprises at least one electrode, the at least one electrode (66) disposed on a surface of the endoluminal support and coupleable to a radiofrequency generator (38).

12. The apparatus of claim 9, wherein the approximation element comprises an element chosen from the group consisting of suction ports (46 – aspirating apparatus), inflation elements (72 – balloon structure) and combinations thereof.

25. A method for mapping out endoluminal gastric reduction (inherent), the method comprising: advancing a radiofrequency endoluminal support into a patient's stomach (12, col. 1:24); and exposing an interior of the stomach (12, col. 1:24) to radiofrequency energy from the support at at least one specified location, wherein said exposure creates a visible marking ("lesions" are visible). See, *inter alia*, figures 15 and 16.

26. The method of claim 25 further comprising approximating the interior of the stomach (12, col. 1:24) and the endoluminal support. See, *inter alia*, figures 15 and 16.

27. The method of claim 25, wherein exposing the interior to radiofrequency energy comprises locally burning (ablating) a mucosa layer of the interior of the stomach (12, col. 1:24). See, *inter alia*, figures 15 and 16.
